Clinical Innovation, Outreach, and Global Health Initiatives

2000 – Present	<p>Co-Director and Co-Founder, University of Alberta Chest Pain Program, Division of Cardiology, University of Alberta, Edmonton, Alberta, Canada.</p> <p>Designed, implemented and funded the first formal Chest Pain Assessment unit in Canada in conjunction with Dr B. Holroyd. The program manages between 750 - 1200 patients/year and was shown to reduce the rate of inappropriate discharge of high-risk patients from the emergency department. Additionally the program facilitates timely discharge from the emergency department where appropriate. The program is currently expanding provincially as a tool for peripheral emergency departments formally (Director and Founder, Peripheral Chest Pain Program, Mazankowski Alberta Heart Institute, Alberta Health Services) and informally through the Emergency Clinical Care Network electronic Clinical Practice Guidelines (eCPG) initiative.</p>
2004 – Present	<p>Co-Chair and Founder, Vital Heart Response, Alberta Health Services, Edmonton, Alberta, Canada.</p> <p>Developed, designed and implemented the first paramedic based pre-hospital dual reperfusion program fully integrated into regional cardiology care. Through research we initiated the first systematic pre-hospital STEMI treatment program in Canada (collaborator - Dr. Paul Armstrong). The success of this 'proof of concept' led to formation of a regional steering committee (Drs. Neil Brass (co-chair) and Sunil Sookram). This program facilitates individual patient risk assessment and reperfusion decision in a timely manner - the most important factor to improve STEMI patients outcome. The clinical platform has allowed expansion of the program to treat STEMI patients in Edmonton as well as our rural referral regions (approximately 1.8 million Albertans served). The program has been acknowledged for its success nationally and internationally. Recent evidence (2009-2011) from the Canadian Institute of Health Information demonstrates that Alberta has the lowest 30 day mortality in this patient population. The regions treated by the Vital Heart Response program have the lowest 30-day mortality in the province of Alberta.</p>
2007 – Present	<p>Director, Adult Cardiac Catheterization Laboratory and Interventional Cardiology, Department of Medicine, University of Alberta, Edmonton, Alberta, Canada.</p> <p>Developed and implemented weekly quality assurance and clinical case conference to unify the Interventional Cardiology group approach to revascularization and provide a forum to discuss patient safety.</p>
2010 – Present	<p>Co-Chair, Acute Coronary Syndromes Committee and Member, Cardiovascular Health and Stroke Strategic Clinical Network, Alberta Health Services.</p> <p>Provincial clinical initiative focused on improving care for the full spectrum of patients with Acute Coronary Syndromes in the province of Alberta. The program is co-chaired by Drs Welsh and Traboulsi and has developed clinical care pathways that are currently being implemented across the province in conjunction with a quality assurance program to assess success and provide further improvements.</p>

2010 – Present **Co-Chair**, Transcatheter Aortic Valve Intervention Program, Division of Cardiology, University of Alberta, Mazankowski Alberta Heart Institute, Edmonton, Alberta, Canada. Developed and implemented the first percutaneous transcatheter aortic valve implantation (TAVI) program in Alberta. This includes a dedicated quality assurance initiative tracking outcomes of all referred patients. This program provides a minimally invasive approach to the treatment of patients with severe aortic stenosis who are at prohibitively high risk or are not candidates for open aortic valve replacement. Untreated these patient have a poor prognosis with a 2 year mortality of > 50%. This program was a regional initiative and was the first centre in Alberta to offer this novel therapy. Specifically, the native aortic valve is replaced by implanting a valve mounted on a stent through a catheter. More than 65 procedures have been completed to date.
